

**CARE INSTRUCTION:**

- Simply rub off loose dust
- Remove stains with a cloth with cold or lukewarm water, not warmer than 38°C (100 F)
- We recommend using a soft cloth for cleaning
- Damp spots should be removed/dried with a dry cloth
- Only dry our STAY seats and beds outside in the air. Never use excessive heat on the fabric
- Careful ironing on a low temperature is possible

For ideal maintenance of your STAY furniture collection we offer our MEDA Cleaning- and Maintenance products for outdoor fabrics. Stains and unpleasant smells can easily be removed with our MEDA Cleaning Agent. After cleaning we recommend our MEDA Impregnating Agent which protects the outdoor fabrics water- and dirt repellent features. This protects especially the seams, which are stressed during the use of the product, against ingress of water.

Regular maintenance protects your STAY product against weather related influences and moss. It helps to keep your product in its original state and enhance its longevity.

UV/Fade-resistant	Water repellent	Durable in Volume and Shape	Relaxed posture	Easy to clean

**MATERIAL:**

Our outdoor fabrics are woven from a high quality, weather-resistant polyester yarn which makes them ideal to be used outside. The outside of the fabric has been specially treated to be water repellent and the inside is lined with a flexible TPU-foil, which is elastic and water-tight. In addition their polyacrylate coating makes the fabrics extremely durable and UV resistant.

The light fastness according to ISO 105B02 has a value of 6 on a scale from 1 to 8, in which 8 is the highest possible value. The shrub resistance of the fabric has a value of 30.000 Martindale.

The fabrics are easy to maintain and clean. Most stains can be removed with a soft damp cloth. It is important to remove any stains as quickly as possible before they can move into the fabric. Well maintained our fabrics will last and look good for a long time.

**FILLING:**

Our STAY seats and beds are filled with EPS beans made 100% from polystyrol. The beans are being manufactured on the same day they are filled into the fabric. To achieve the highest quality of polysterol our EPS beans are manufactured in two foaming processes, with a longer rest interval between the two processes.

Our German made EPS beans have these additional quality features:

- Durable in volume, shape and ageing
- Neutral to the environment, ground water and food
- Resistant to mould and fouling
- They can be recycled and are therefore sustainable
- Hygienic, breathable, hypoallergic and dust free
- They contain 98% air and about 2% polystyrol

**STAY PREMIUM BOTTOM**

The 2nd generation STAY Outdoor furniture features a robust 2 layer premium bottom as a standard. The water repellent and fast drying interwoven synthetic fibres covering protects the inner waterproof liner.

It is a very flexible and tear-resistant material featuring a high longevity. The special material properties protect the bottom against mould spots.

These positive material properties makes the bottom cover easy to clean.
